UX / UI case study

# Introduction

To carry out this case study, we will follow the process outlined in the diagram, where we will first propose a hypothesis to validate before designing a process to solve an existing problem. Each section will implement various methodologies to delve deeper into each part of the process and **work toward solving the problem**.

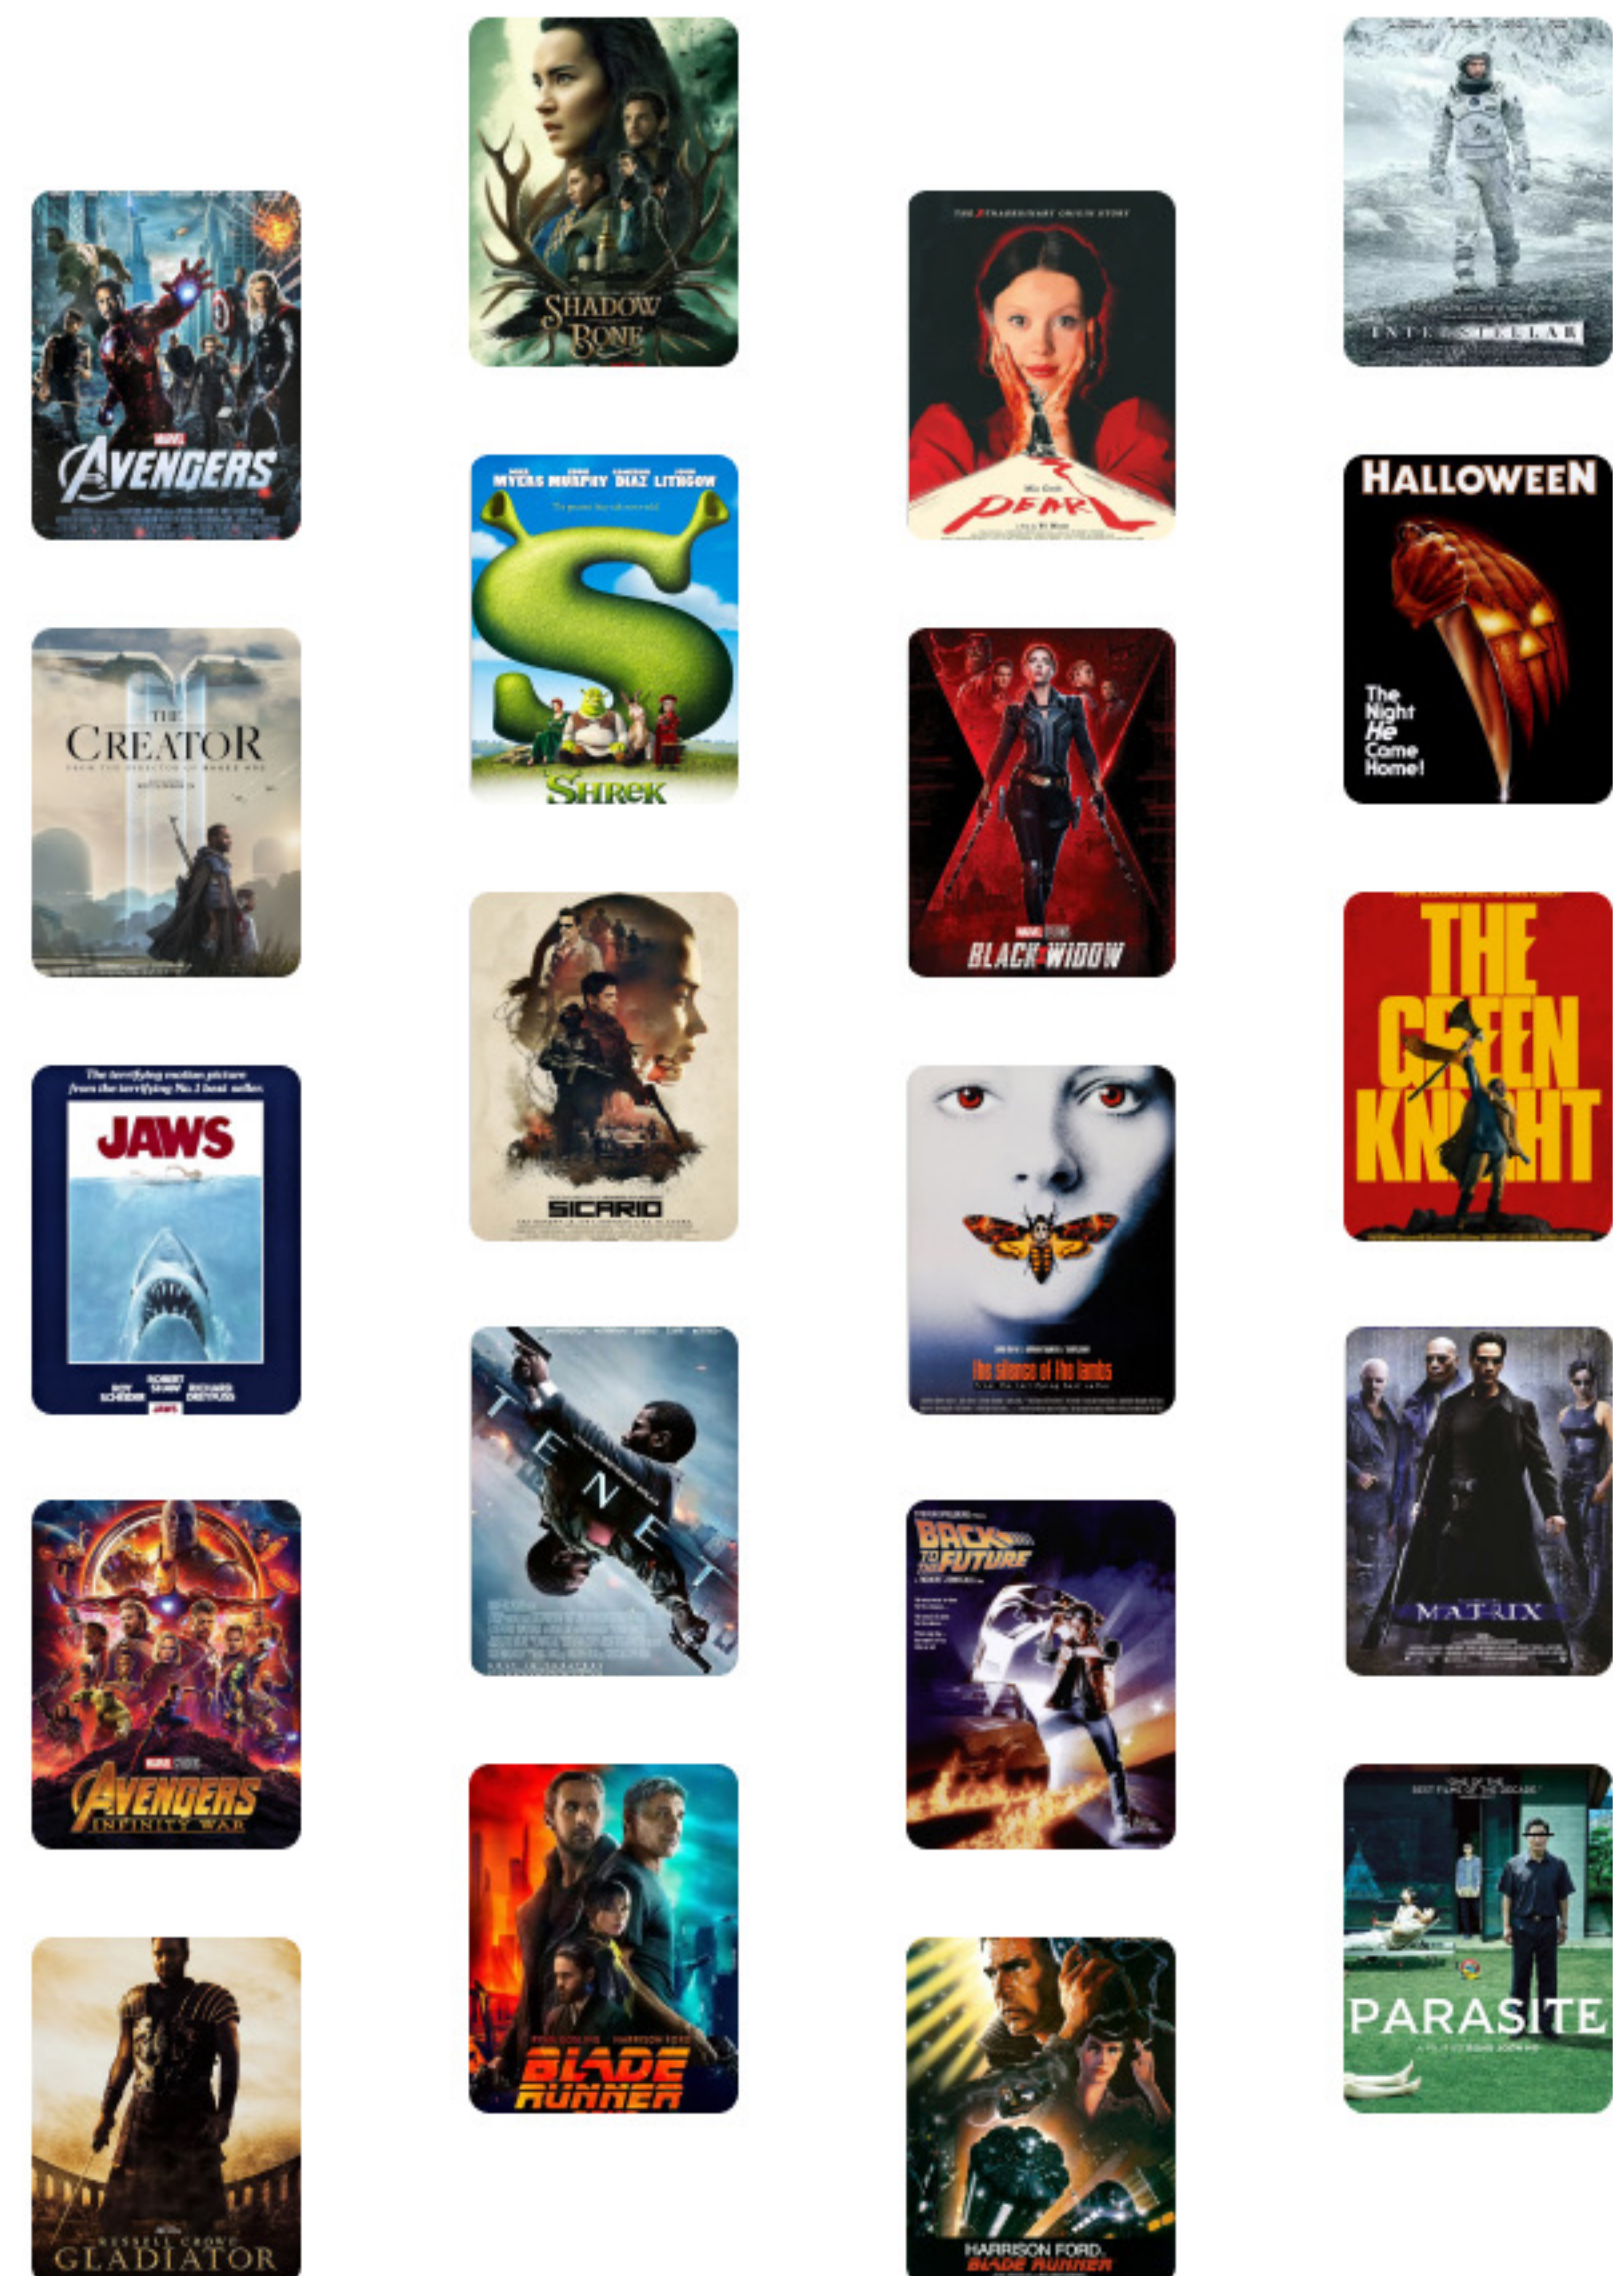

## Hypothesis

Streaming platform users can feel **overwhelmed** by the sheer number of movie and series options, unsure of where to start.

Every time you enter a streaming platform, there's an overwhelming experience due to the **abundance of content**. With so many movies and series available, there's no clear starting point to choose something to watch. It takes an enormous amount of time to find something that catches your attention.

**Too much time is spent searching instead of watching**, and sometimes users end up rewatching a series over and over again.

This is a common experience for streaming platform users, leading to frustration and a sense of wasted time during their leisure moments.

# Interviews

Developing key questions to explore the experience related to the hypothesis.

## Pilar Rodriguez

Interview insights 01Public administrator59 años

Hobby of watching movies; TV doesn't offer the same quality as streaming. They feel overwhelmed by the vast options but enjoy having choices. They watch something daily, occupying most of their free time. They like always having something to watch and rely on platform recommendations due to laziness in browsing the entire catalog. Sometimes they decide immediately, other times they take over 30 minutes and end up watching nothing. They trust recommendations from their family.

## Daniel Villarreal

Interview insights 03Industrial designer30 años

Fantasy as a hobby; they enjoy the wide range of content and find it entertaining. They get bored when there's no new content. After finishing a series they liked, they struggle to find something that matches the positive feeling. They use platforms intermittently, often for plans with their girlfriend. They prefer series, rewatch movies, and rely on reels and friends for validation. They value their time, so their choice is important. The process of choosing something new is slow.

## Milena León

Interview insights 05Math teacher50 años

Watching series or movies is mostly a family activity. They find it frustrating when productions are removed from platforms. TikTok and family serve as validation sources for new content. TikTok and reels help them discover hidden gems. It's a daily plan; when watching alone with their daughter, decisions are quick. With family, it takes over 30 minutes and can lead to conflict and frustration. They often give new content a chance, with one family member usually resolving the decision, even if they end up watching the least.

## Daniela Gutierrez

Interview insights 02Business23 años

Not a frequent user of series and movies, but when they do, it's usually out of boredom or to fall asleep. Unlike when they're with family or their boyfriend, it becomes a planned activity. For personal viewing, they may spend 10 to 30 minutes exploring options and sometimes give up. They rely mainly on TikTok recommendations and stick to one genre.

## Juan Barrangan

Interview insights 04Industrial designer32 años

They often repeat content due to their passion for history and Star Wars. They dislike when productions alter historical facts. They consume content daily but only pay full attention once a week. They research thoroughly before watching something new, reading reviews, watching trailers, and consulting family and friends. They have clear genre preferences and rarely venture outside them. They frequently check social media and websites for critics' and audience opinions. They admit to rewatching movies because they find it tedious to search for something new.

## Andres Martinez

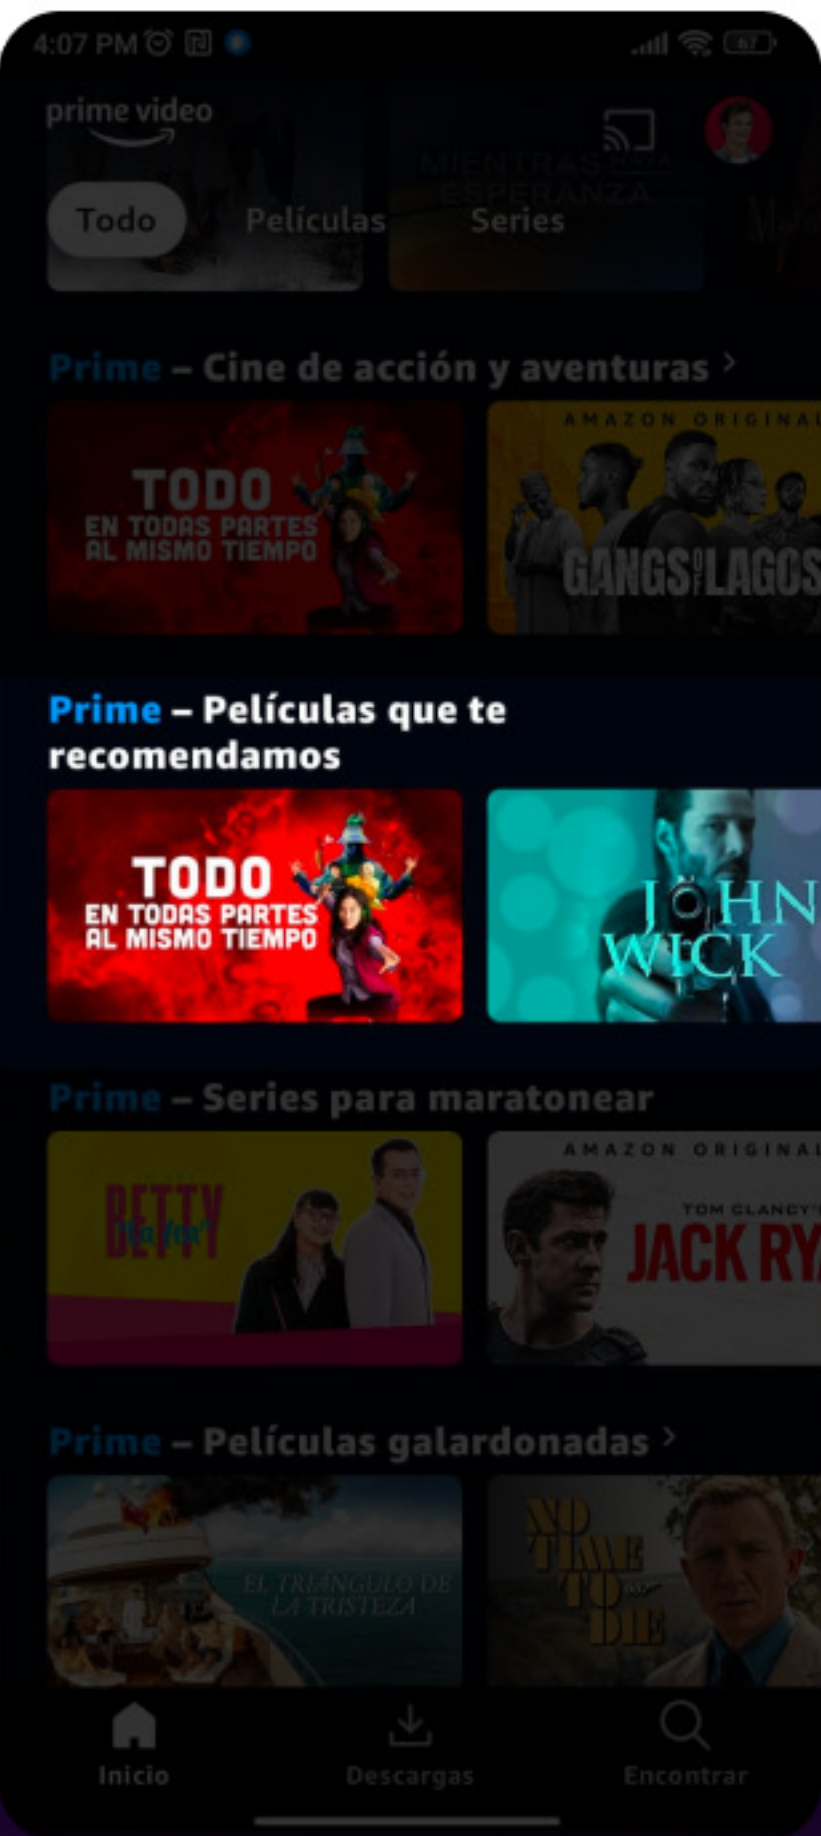

Interview insights 06Student23 años

They watch content for 6 hours a week, sharing platforms with their family. They rely on social media and recommendations from friends and family. They rewatch several series and turn to YouTube if they don't complete their viewing experience.

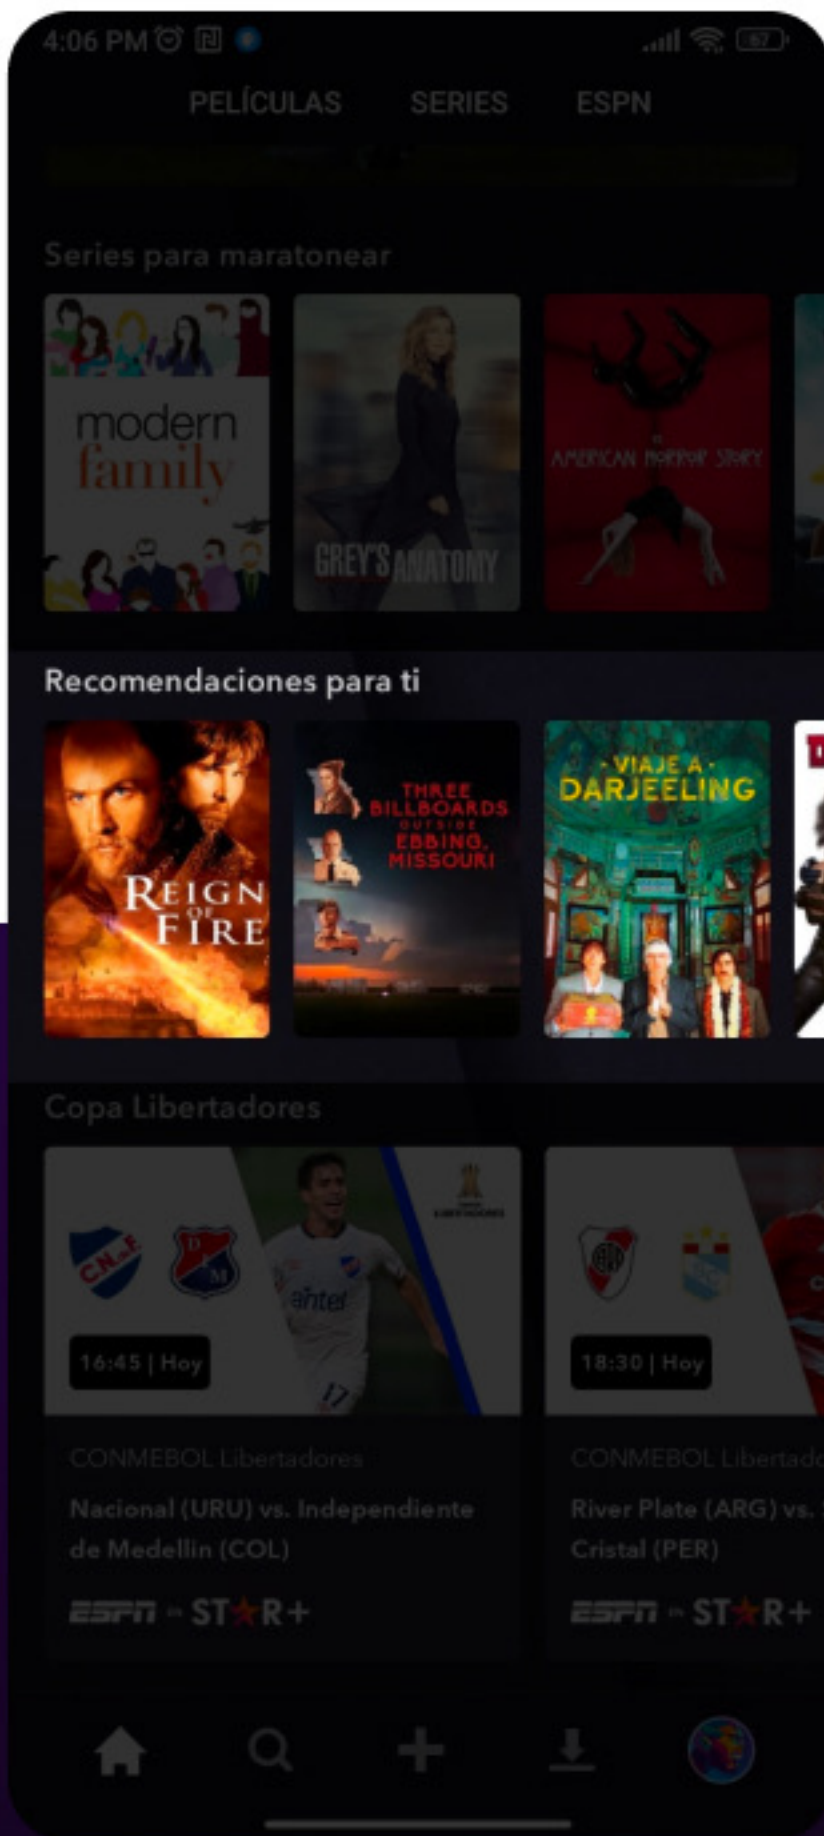

- Family activity
- Overwhelming experience
- Exploring feels tedious
- Comfort zone
- Their time is valuable
- TikTok leads me to hidden gems
- Feeling that there's no new content
- Conflict with family or friends
- Not finding something to watch
- Date
- Effective satisfaction
- No continuity to positive experiences
- YouTube

|                                                | Justwatch                                                                                                           | Moviebase                                                                                                                                 | IMDb                                                                                                                                                         | Netflix                                                                                                                  | Max                                                                                                                                                                 |
|------------------------------------------------|---------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Uso principal                                  |                                                                                                                     |                                                                                                                                           |                                                                                                                                                              |                                                                                                                          |                                                                                                                                                                     |
| How does it work, what does it communicate?    | They recommend series and movies based on their IMDb score.                                                         | A catalog of movies to browse ratings, reviews (within the app, text from certified sources), and trailers.                               | Its main feature is compiling reviews from both certified critics and the general public, presenting them by category.                                       | The entire platform operates based on my profile and what I've watched, but it only targets me in one or two categories. | When visiting different user profiles, their catalogs and information are nearly identical, with only a small, loosely related section of personal recommendations. |
| Interface                                      |                                                                                                                     |                                                                                                                                           |                                                                                                                                                              |                                                                                                                          |                                                                                                                                                                     |
| What is the experience like?                   | Very similar to apps like textile, it detects my country and allows me to customize the platforms I have.           | Experience almost identical to JustWatch and other streaming platforms.                                                                   | Very clear, divides new movies by categories, platforms, and streaming systems, focusing only on new content.                                                | Wide, organized, and diverse.                                                                                            | Aimed at different producers, categorized by type and focusing on their major releases, with a simple device to understand and without guessing with information.   |
| Platform                                       |                                                                                                                     |                                                                                                                                           |                                                                                                                                                              |                                                                                                                          |                                                                                                                                                                     |
|                                                | Only with registration does it speak to me in a personalized way, but the experience is general from the beginning. | Experience almost identical to JustWatch and other streaming platforms.                                                                   | Its main objective seems to be informative; it doesn't invite you to watch something new as much as it informs you about the quality of the latest releases. | If you want to rewatch series, it's very straightforward and easy. Discovering new content is more complicated.          | Communication with the user focuses on explaining major productions and releases, inviting them to revisit their main titles and latest releases.                   |
| Advantages                                     |                                                                                                                     |                                                                                                                                           |                                                                                                                                                              |                                                                                                                          |                                                                                                                                                                     |
|                                                | Access to reviews from all platforms and direct access to content playback.                                         | Abundant information about each movie or series; I can find out almost everything about the production.                                   | I can learn about all the latest cinema releases and platforms, staying fully updated.                                                                       | Large catalog, very simple interface to understand.                                                                      | They have productions that have been major hits, so they come with several recommendations and provide a good reputation.                                           |
| Disadvantages                                  |                                                                                                                     |                                                                                                                                           |                                                                                                                                                              |                                                                                                                          |                                                                                                                                                                     |
|                                                | Generic catalog; you must look for the registration option to have a personalized experience.                       | It's slow to play the movie, and the interface provides too much information, which can make the experience overwhelming and purposeless. | Even with registration, it's not a fully personalized experience; I receive information from many sources.                                                   | It promotes its new productions more and doesn't communicate directly with my tastes.                                    | The focus on major releases and launches hinders the discovery of smaller-scale productions.                                                                        |
| Can I make a decision and watch something new? |                                                                                                                     |                                                                                                                                           |                                                                                                                                                              |                                                                                                                          |                                                                                                                                                                     |
|                                                | Yes, but the experience doesn't aim for a quick decision; it can be as time-consuming as other platforms.           | Yes, but it's very likely that the experience will be long, and my goals may change during the process.                                   | For watching a new release, yes, but it's more informative, directing you to read reviews and details about the production.                                  | Yes, but it still becomes a cumbersome experience when exploring new content.                                            | The focus on major releases and launches hinders the discovery of smaller-scale productions.                                                                        |

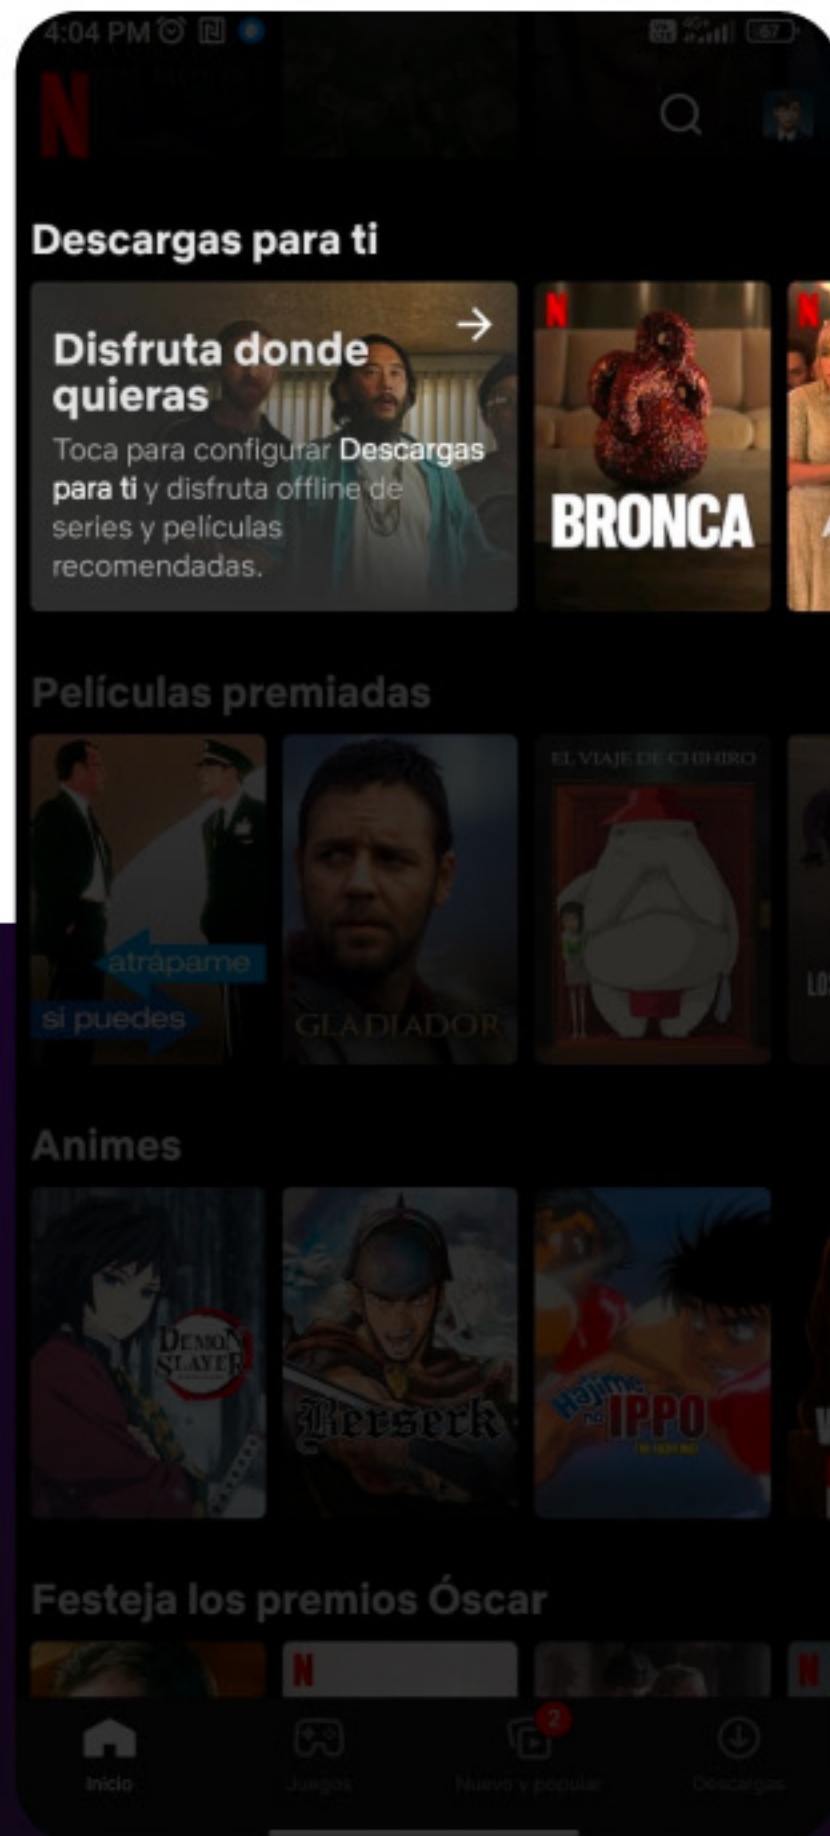

Prime Video communicates directly with recommendations very close to the movies or series that users have previously watched, including some of their latest additions to the platform.

Star+ offers an experience similar to Prime Video, speaking directly to the user and placing this section very close to the beginning of the main interface.

HBO Max recommends productions completely different from what has been watched before, offering titles that are not close to the user's preferences, suggesting a "take a risk" dynamic.

After scrolling down quite a bit on the main interface, Netflix encourages downloading content without focusing on conveying that this content is specifically made for a particular user.

## Data

For Peter Katsingris, Vice President of Audience at Nielsen, this data suggests that "streaming platforms could refine their recommendations better to match users' tastes."

"Having options is great for consumers, but it also complicates an industry that continues to fragment and seek ways to influence [user] behavior," Katsingris stated in the report.

## Psychology

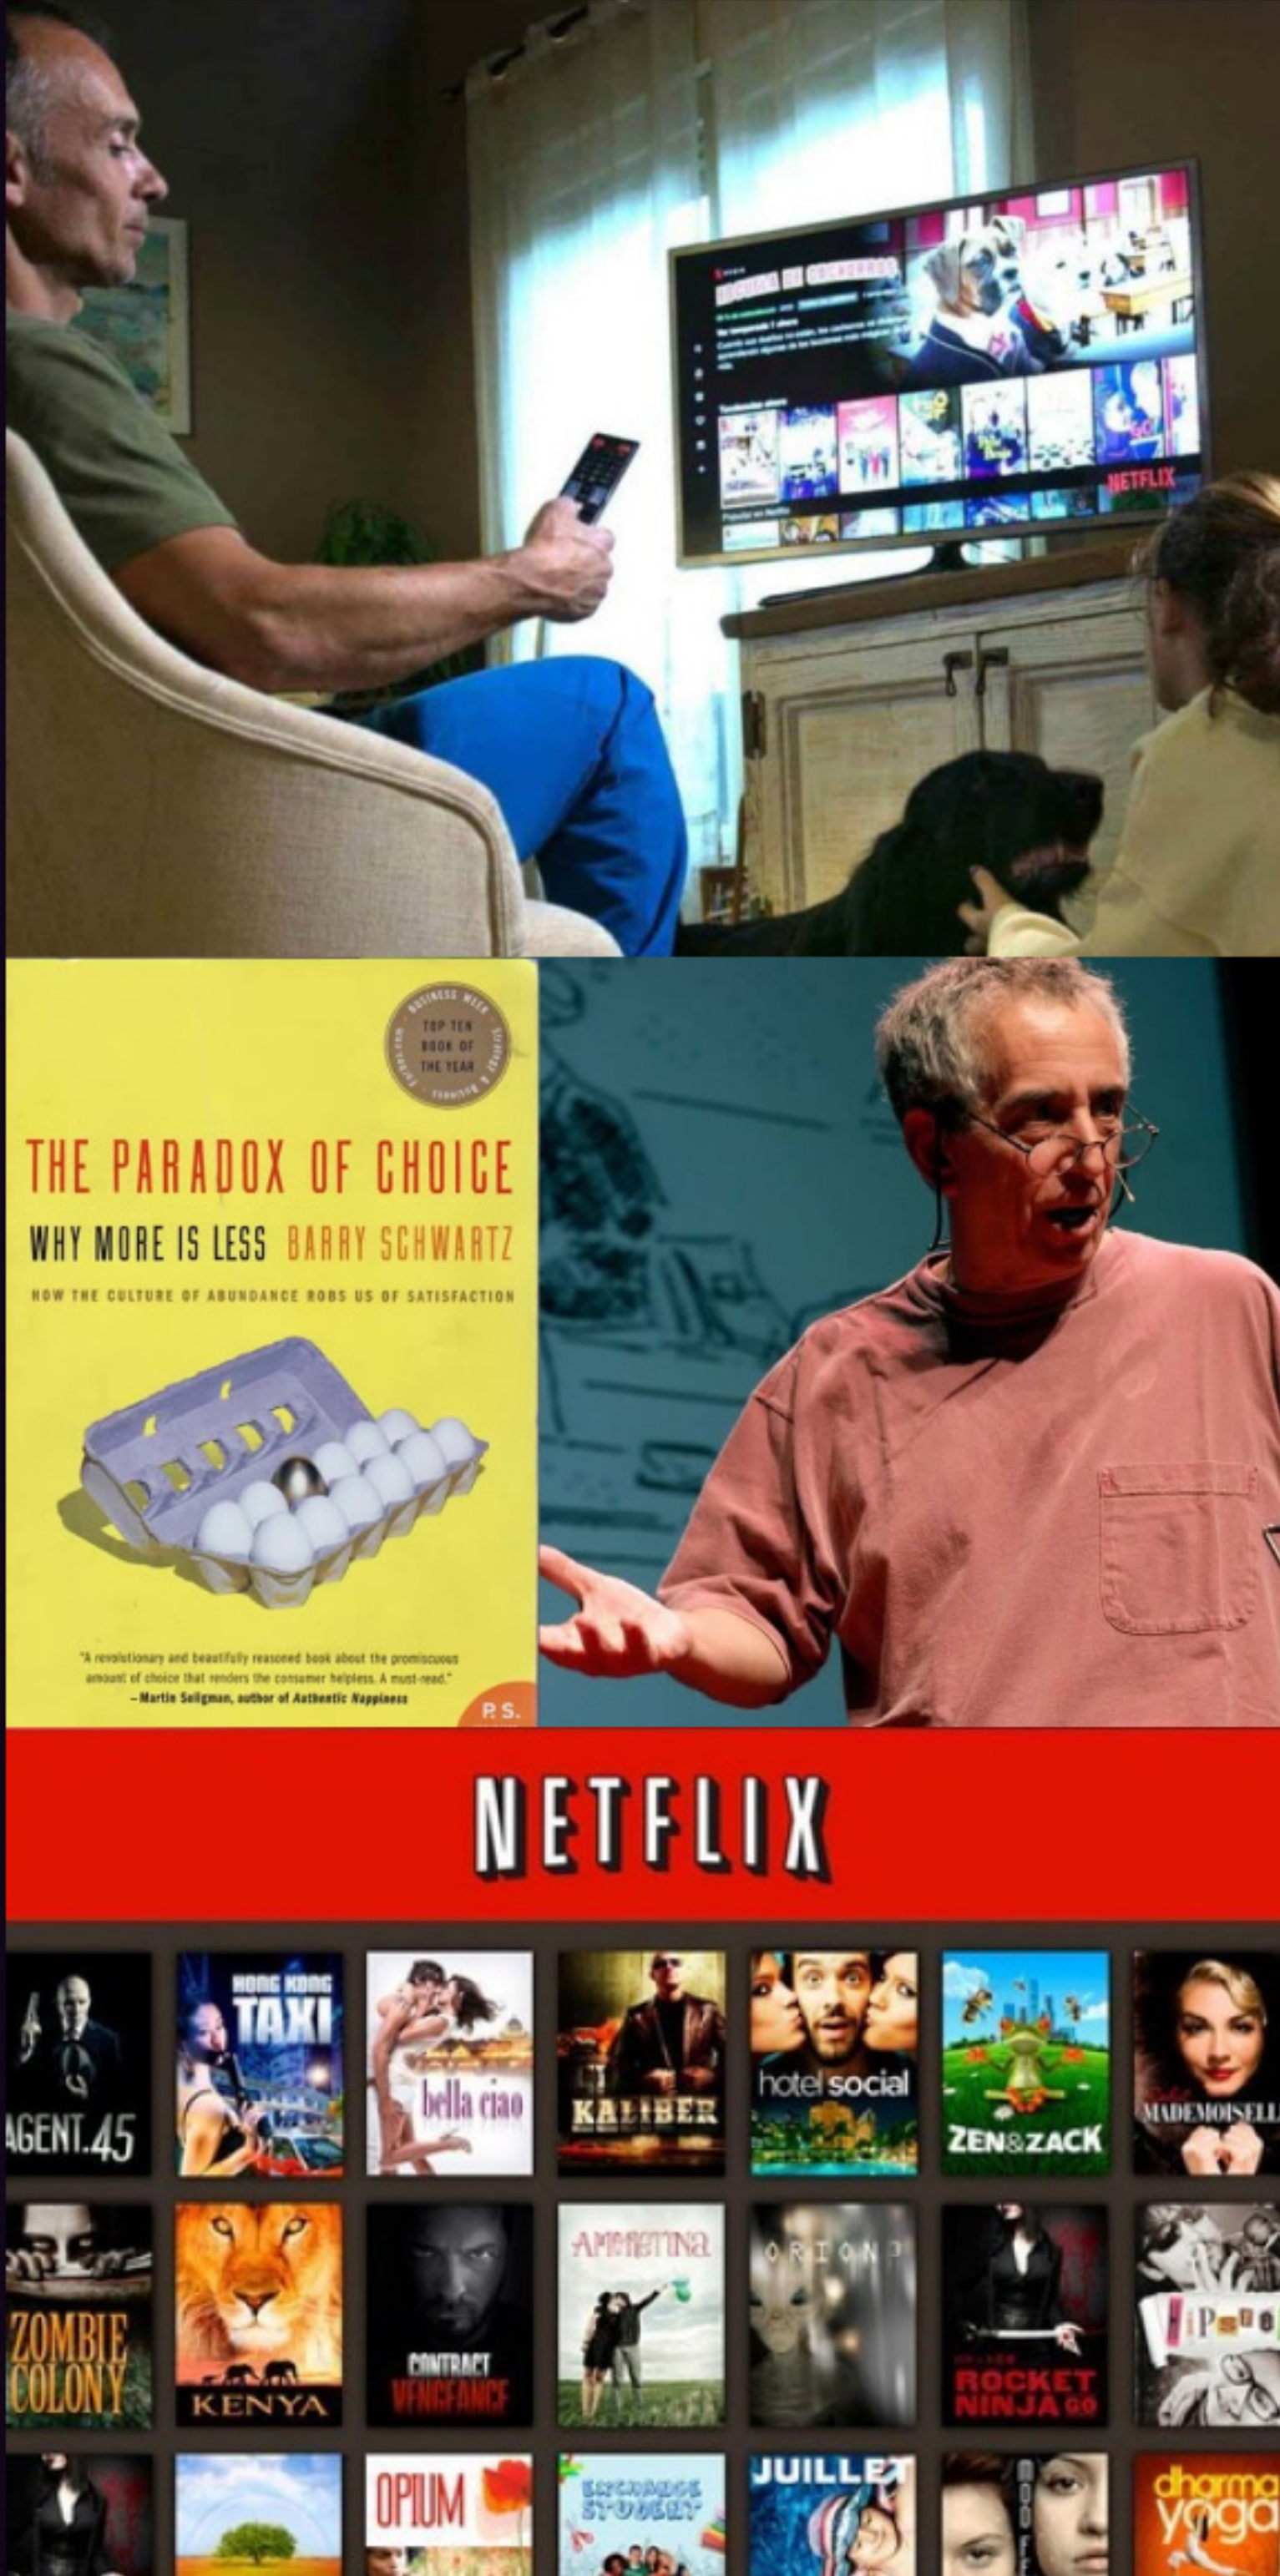

The paradox of choice | Barry Schwartz: "paradox of choice," which explains the human tendency to be less satisfied with the decisions made when there are more alternatives to choose from.

## Public Opinion

Researchers at the California Institute of Technology (United States) published in the journal Nature.

"Humans believe that having multiple options makes decision-making easier; however, the study reveals that, contrary to what is thought, our brain becomes stressed when faced with an overly varied and extensive offer."

"As always, science has the answer, and whether we are faced with an abundant variety of food or Netflix's extensive catalog, our brain will behave in the same way: overwhelmed, and it will be much more difficult to choose a single option."

# Defining the problem

## Simple and impactful

Streaming platform users struggle to make decisions efficiently when choosing new content, resulting in a frustrating experience and a sense of wasted time.

# Users and pain points

## User 01

Camila is a mother of two, 50 years old, works as a public servant and is highly regarded in her position. Her time is precious, and her favorite part of the day is coming home and watching a series on Netflix, her favorite platform.

## User 02

Carlos is a 28-year-old young man who enjoys his job and talks about movies with his colleagues. However, his daily life is so busy that he doesn't always have time to enjoy a good movie. His time is precious, and he is very selective about what he decides to watch, especially if he shares it with his family or girlfriend. He likes to discuss what he watches and debate with his friends. He wishes he could discover more but gets frustrated when he ends up watching the same things over and over.

## User 03

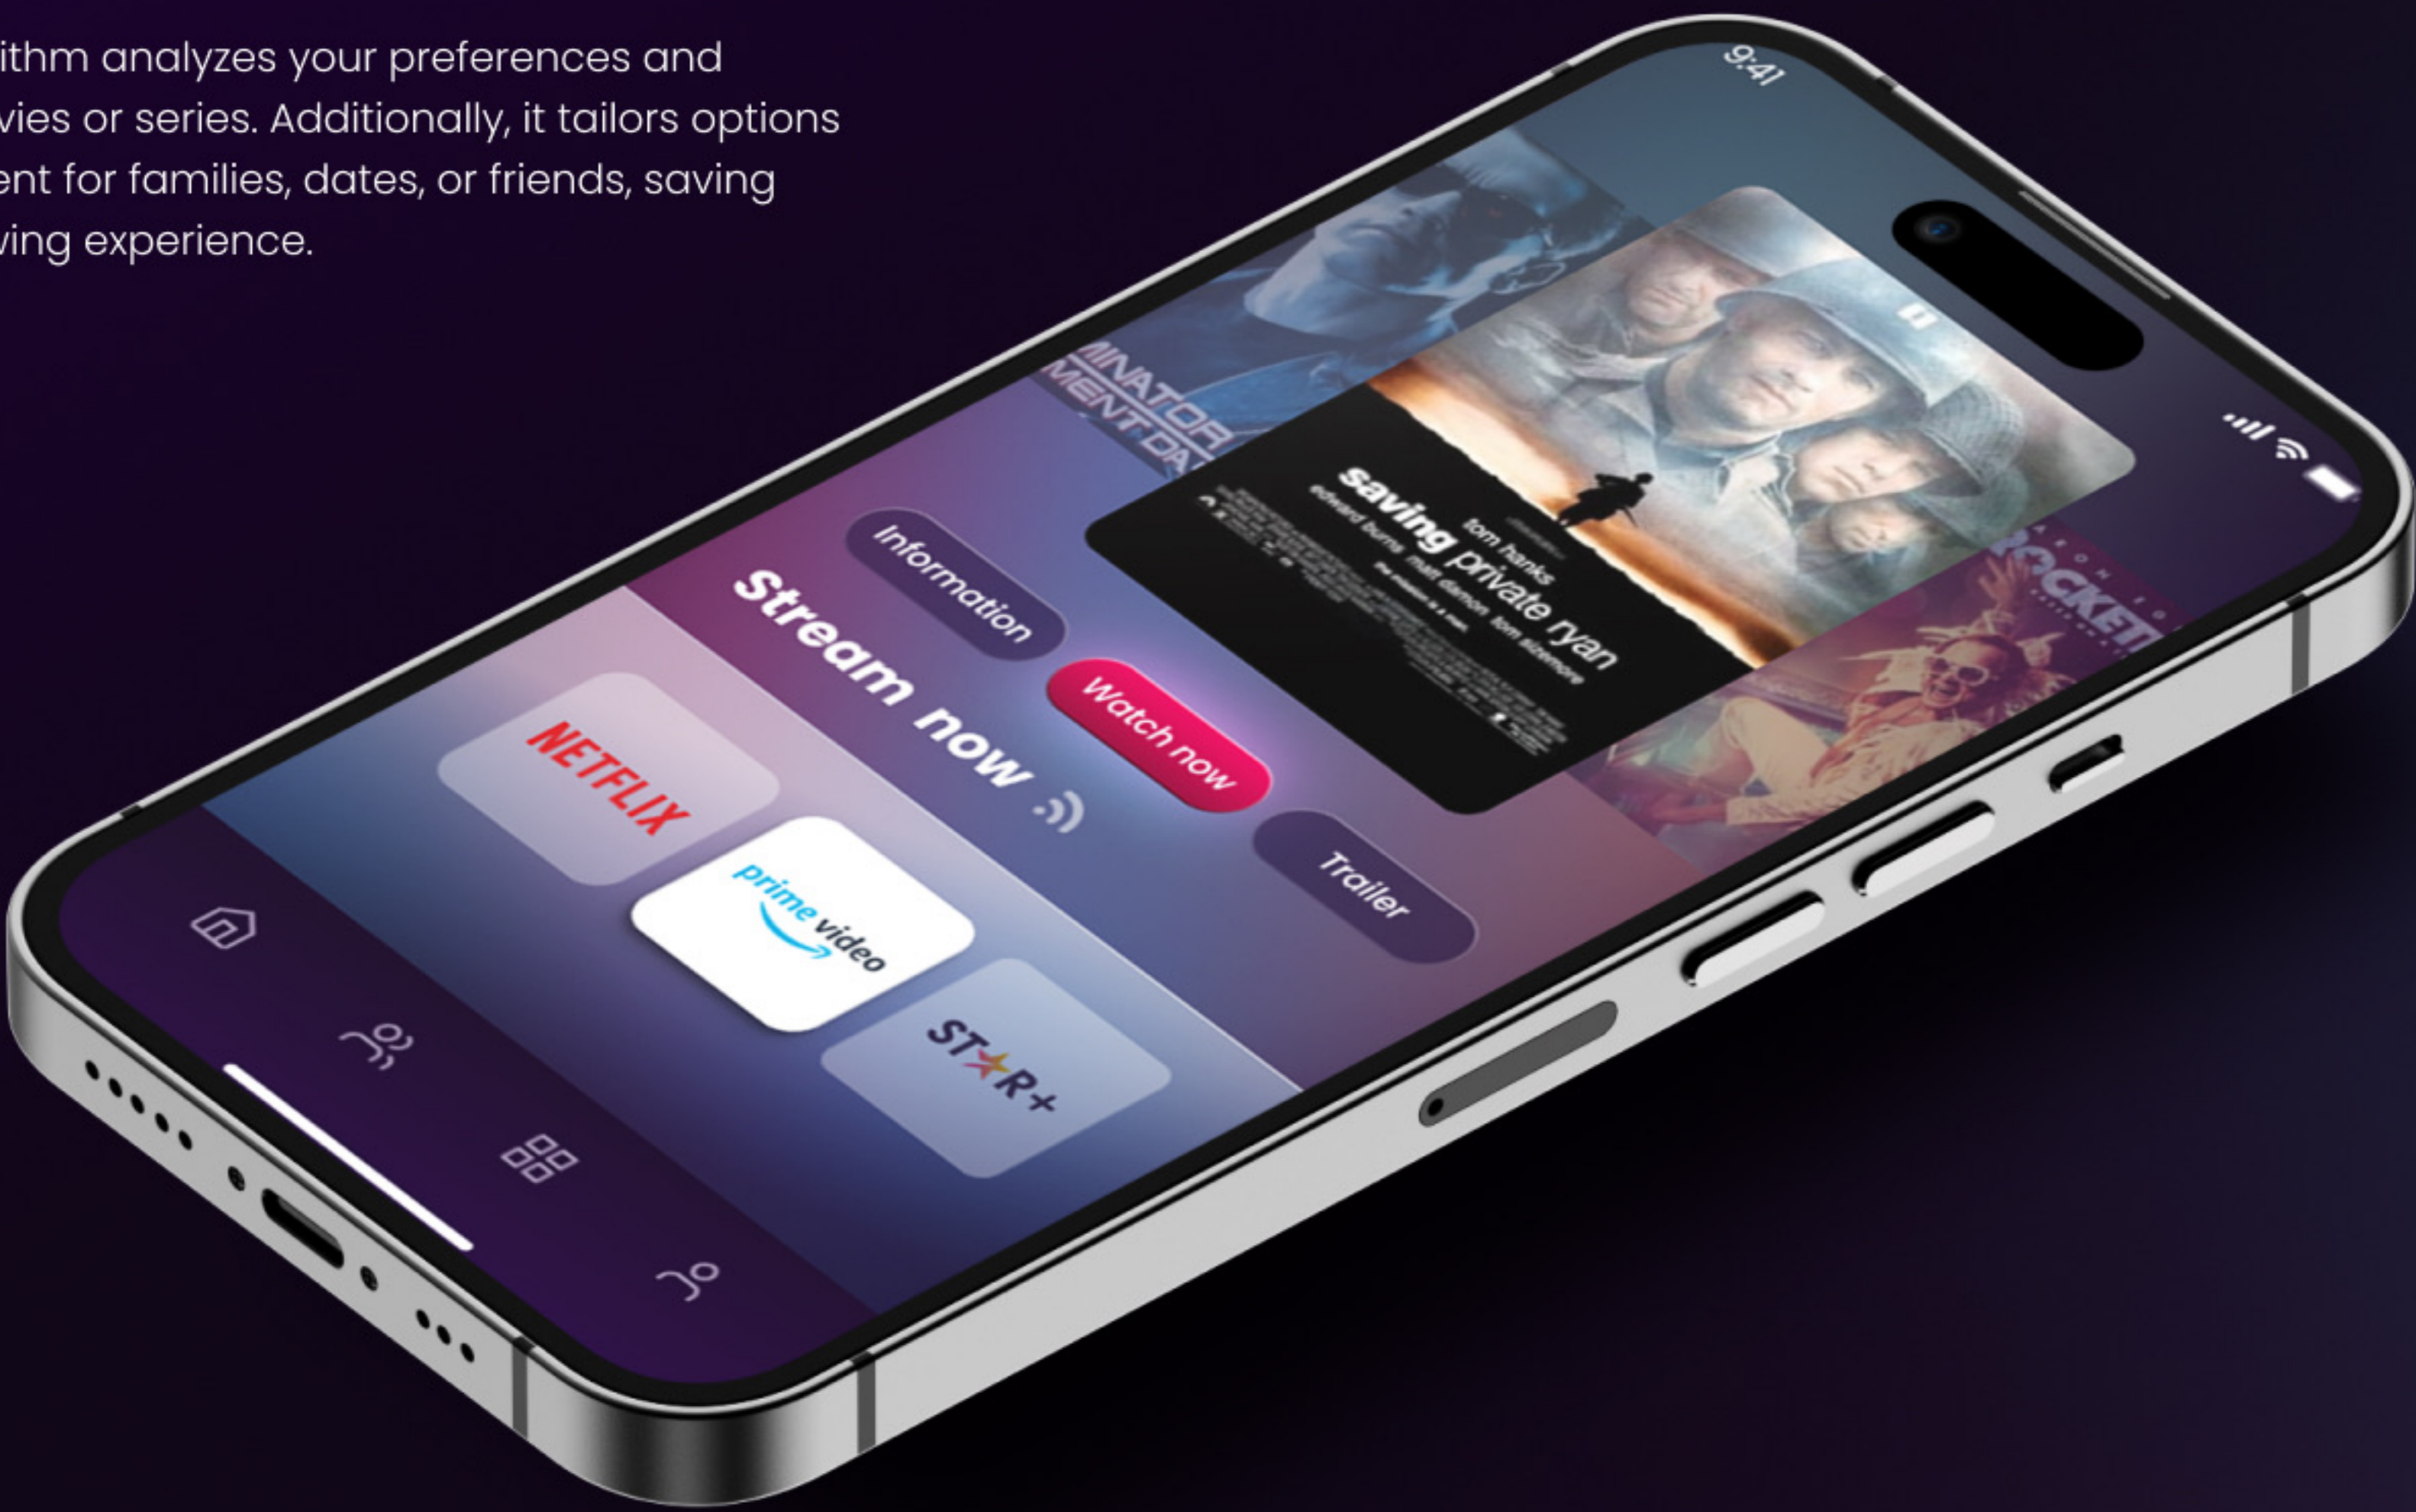

Lina is a 23-year-old recent graduate who often rewatches the same movies and series before bed. It's a rare event for her to watch something new, but she considers herself an anxious person and can take up to 30 minutes to choose something. Most of the time, she prefers to go on TikTok or YouTube and consume short, satisfying content.

# What is the solution?

The app solves the frustration of choosing content on streaming platforms by offering personalized recommendations in seconds.

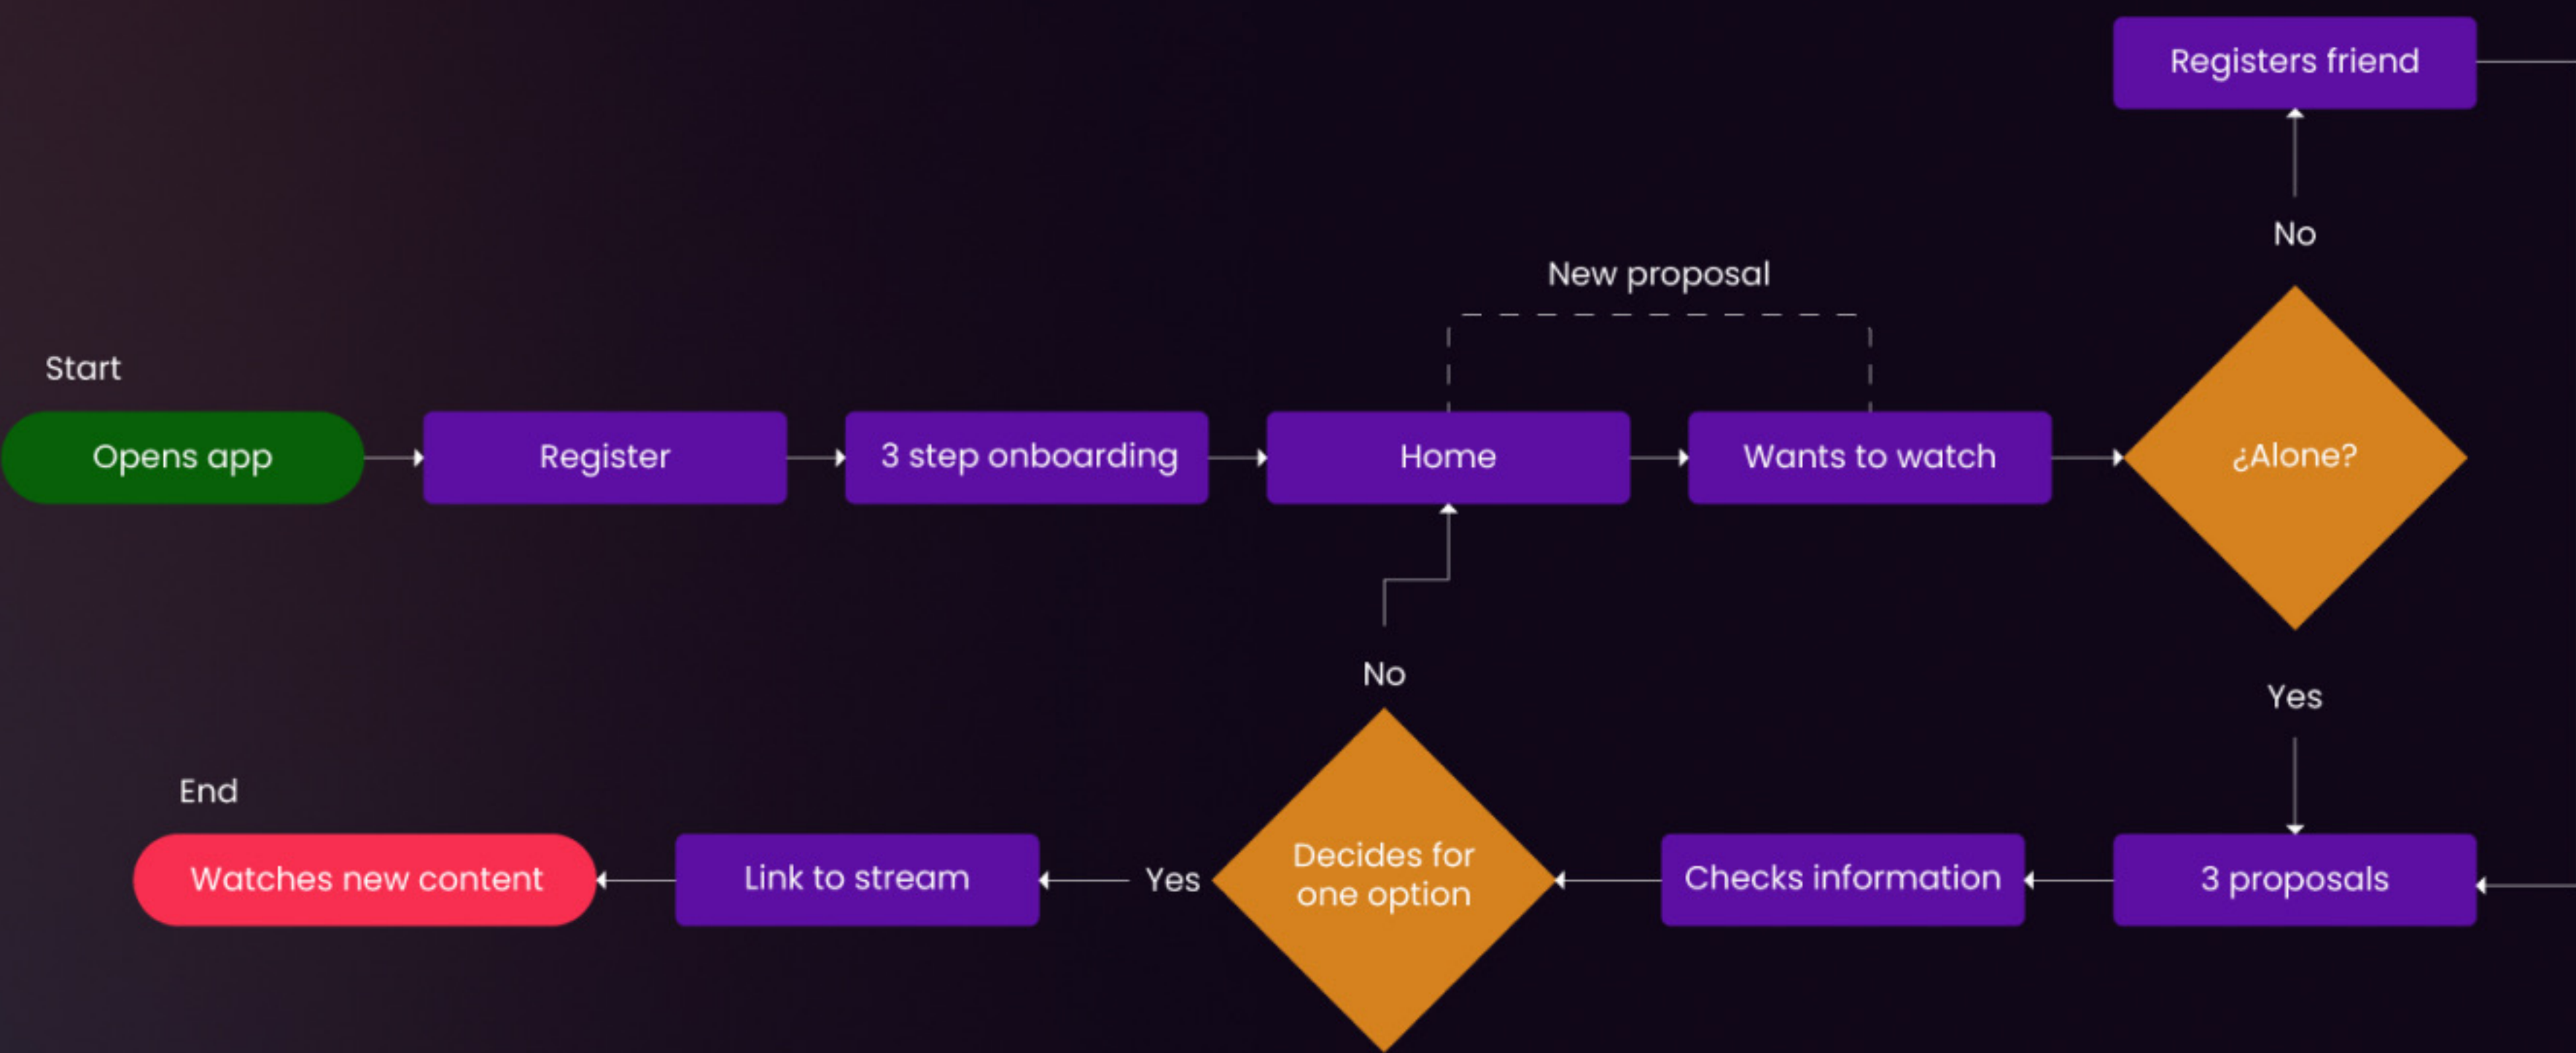

With a quick registration, the algorithm analyzes your preferences and subscriptions to suggest ideal movies or series. Additionally, it tailors options for groups, ensuring suitable content for families, dates, or friends, saving you time and enhancing your viewing experience.

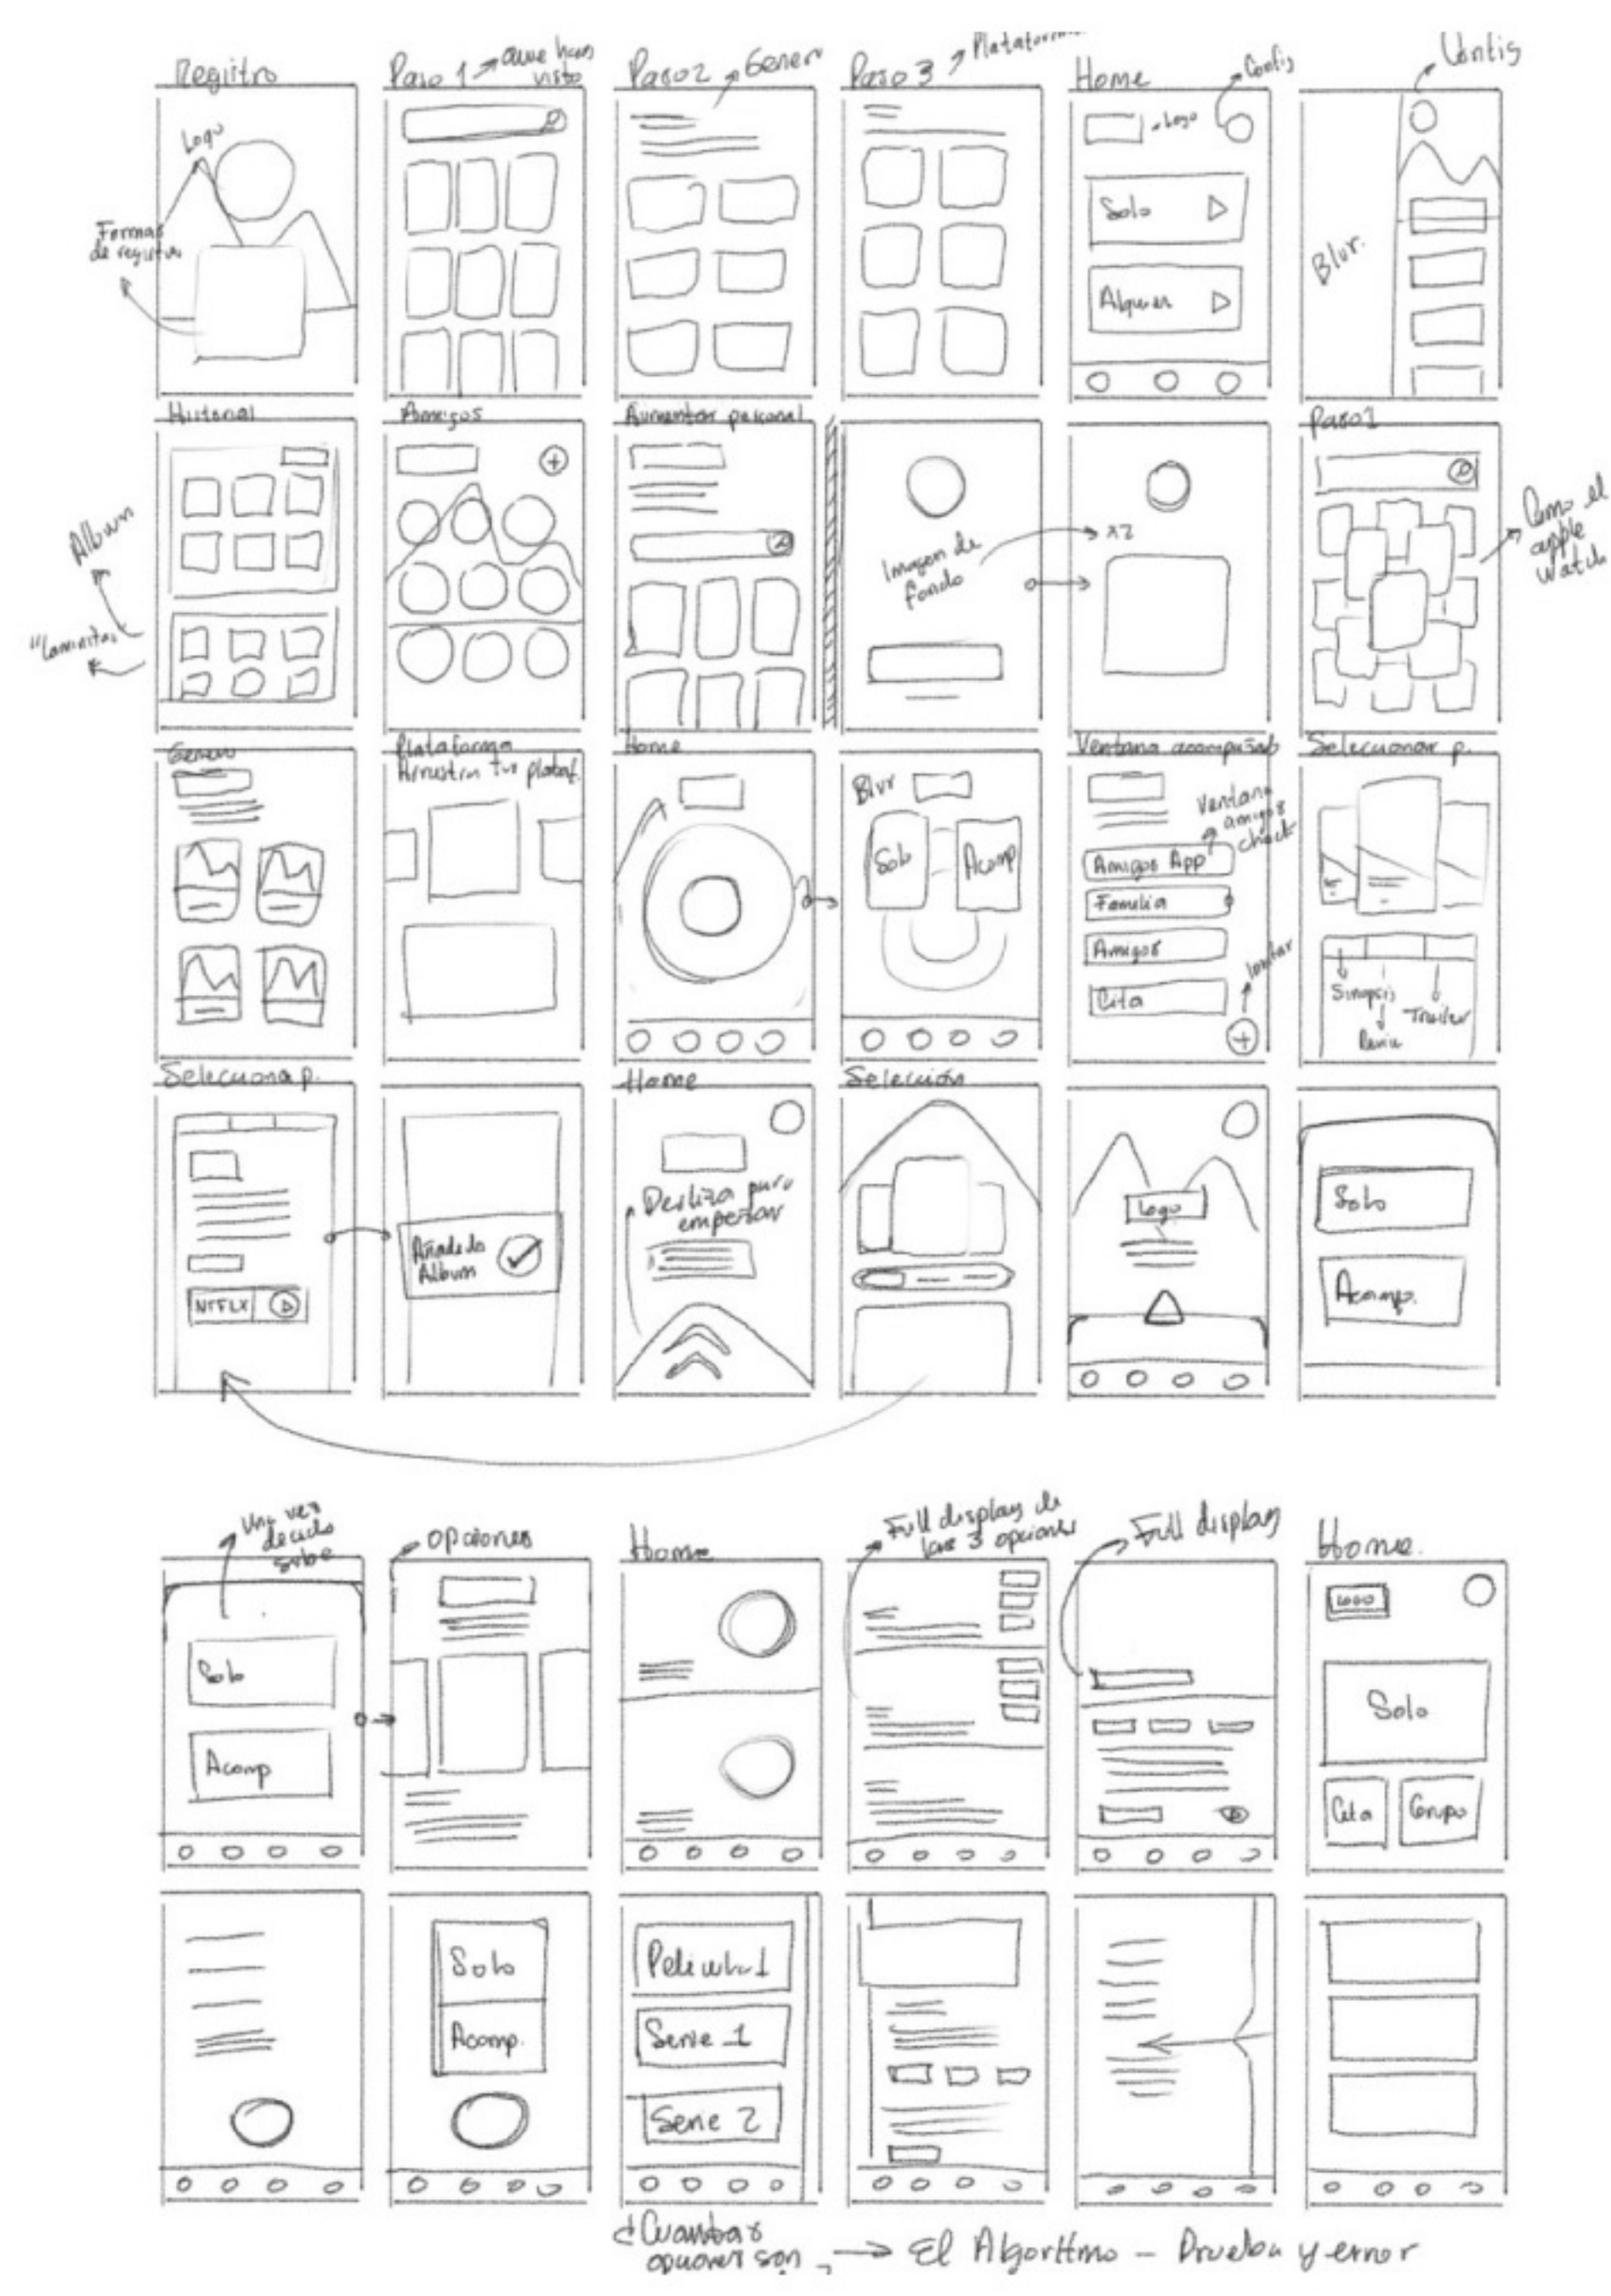

## Information architecture

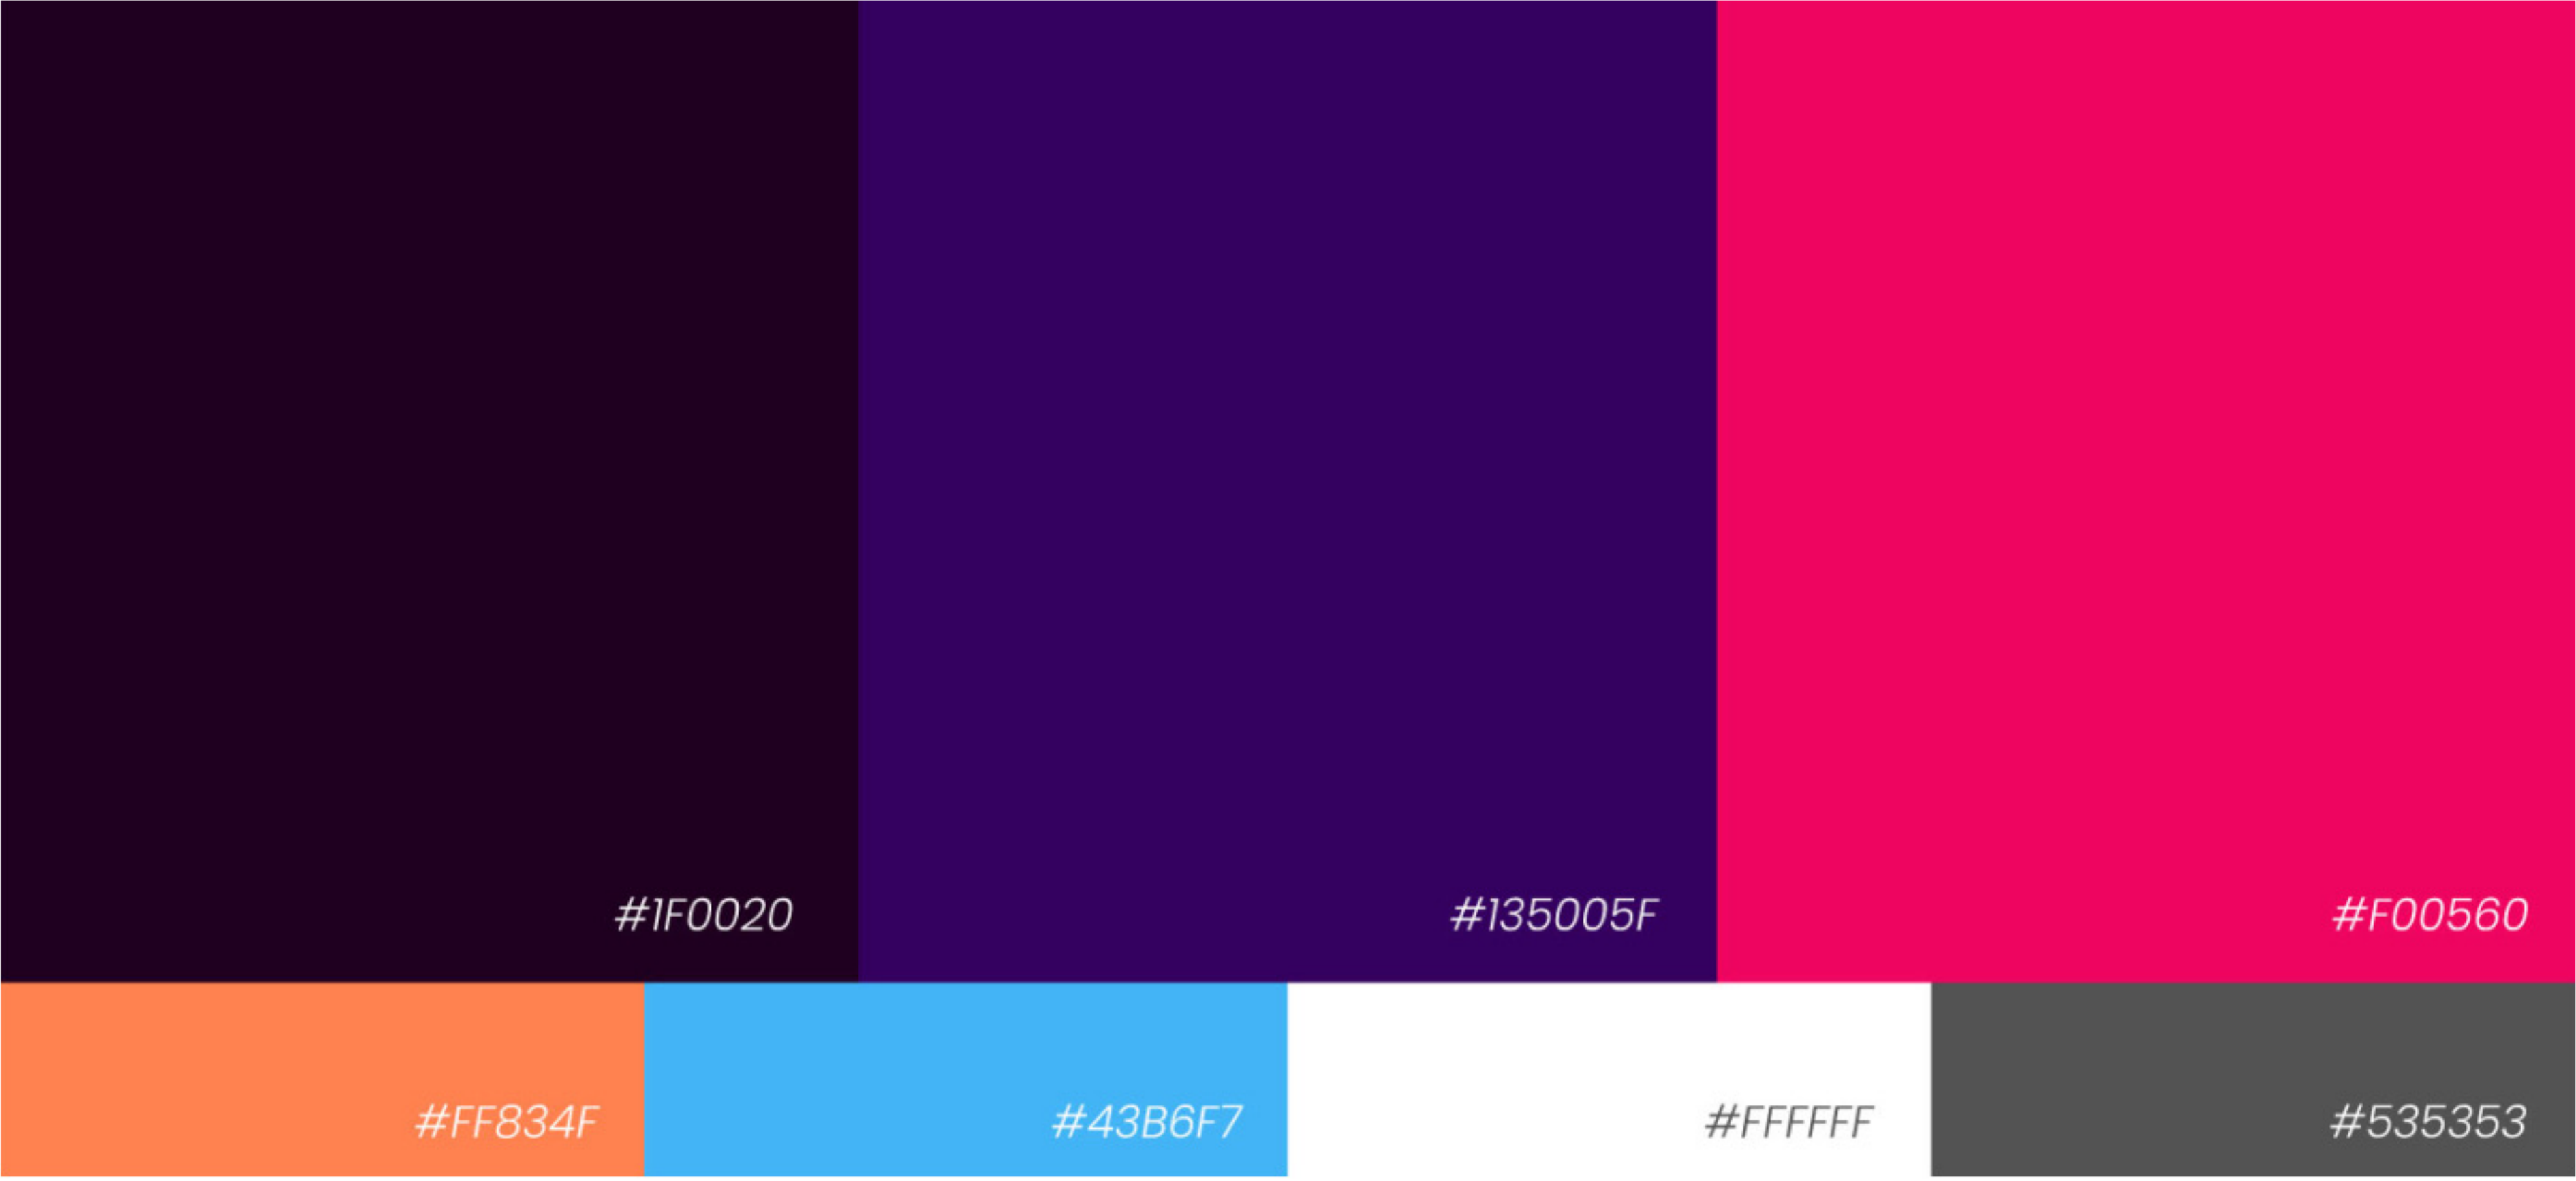

## User flow

# Ideation

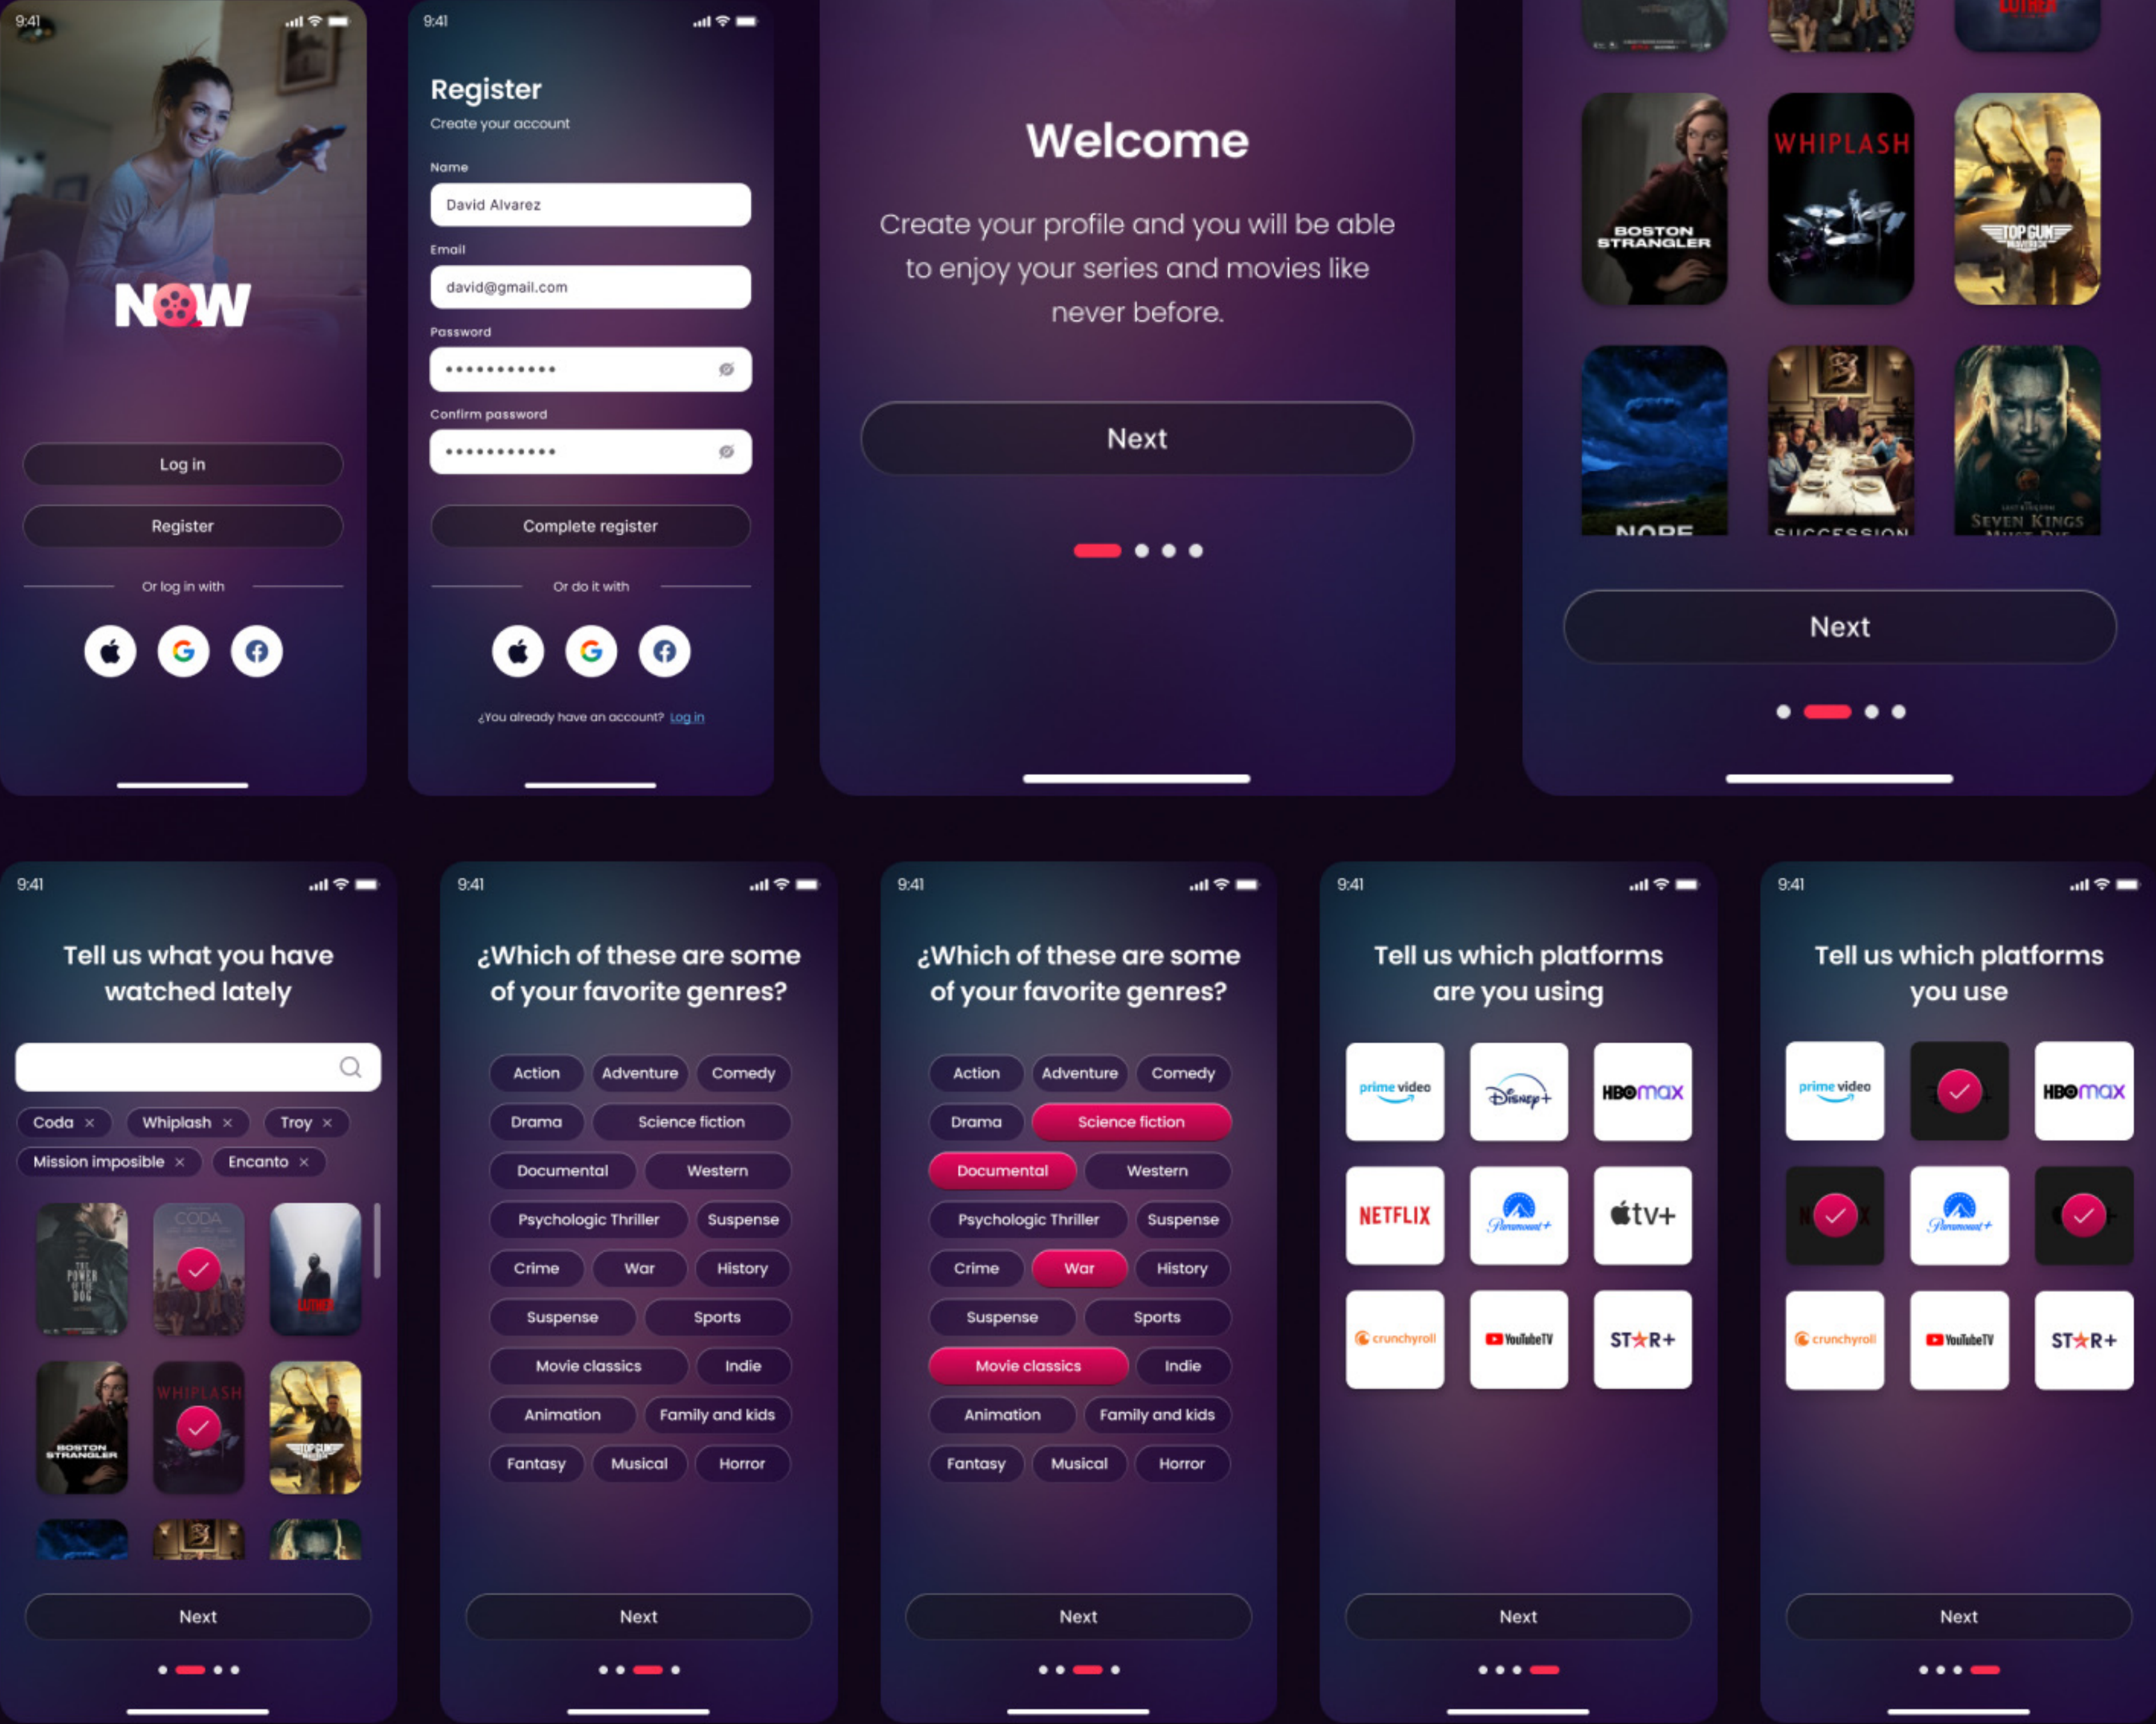

# Color scheme

# The experience

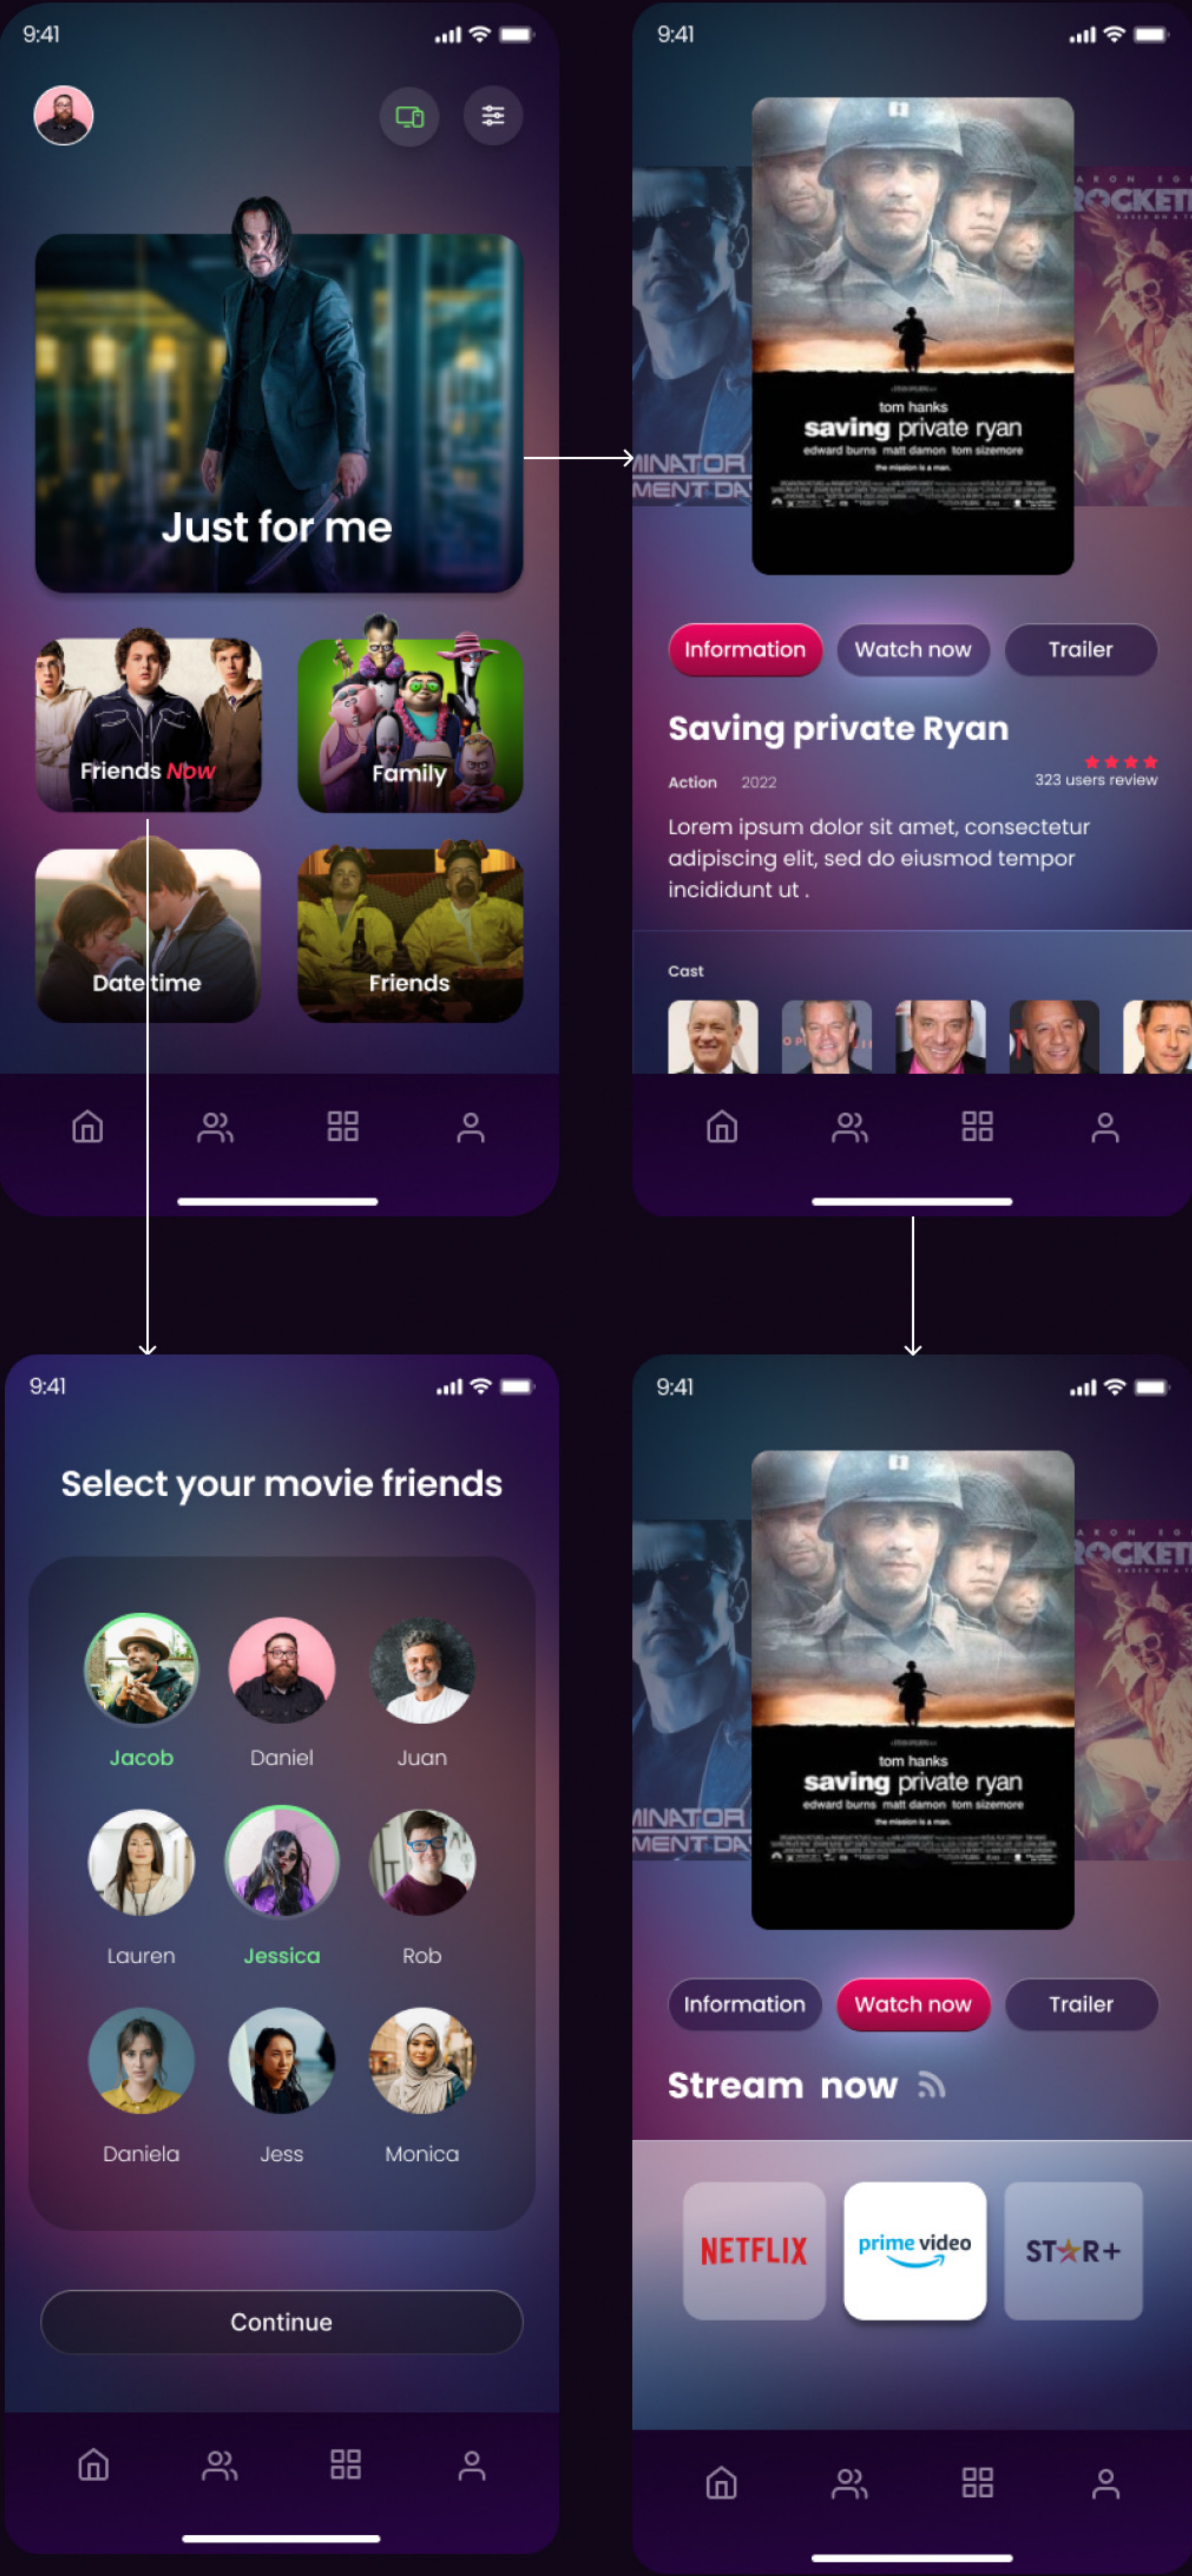

The user's first experience is the registration process, **where the algorithm begins to understand their preferences.**

This quick setup allows the app to provide personalized recommendations based on the user's viewing history and subscribed streaming platforms.

**In less than a minute,** the user can decide which movie or series to watch. The app's algorithm suggests content that the user is most likely to enjoy, ensuring a quick and satisfying decision-making process.

The main goal of the interface is to guide the user to the most efficient and enjoyable choice. The first tab provides a summary, cast, and general reviews, while the third tab offers a trailer for further insight without extending the search time.

This streamlined approach not only saves time but also enhances the viewing experience by delivering tailored recommendations that align with the user's preferences and subscriptions.

# Prototype testing

To validate the proposed design in the prototype, we will conduct usability tests where the user experience will be measured through key metrics and the design's intervention at any point in the workflow.
